

## **TECHNICAL DATA SHEET**

Revision: 3

Edition: June/2024

### **STANLUX PASTE 266**

- Aluminium paste with lamellar particles
- Leafing grade with fine particle size, specially recommended for high grade and brilliant printing inks
- Solvent: mixture of White Spirit and High Aromatic

#### ***SPECIFIED CHARACTERISTICS***

- |                                   |             |
|-----------------------------------|-------------|
| • Solid content                   | 63% to 67%  |
| • Leafing                         | 70% minimum |
| • Maximum retention in # 325 Mesh | 0.1%        |
| • Maximum water content           | 0,15%       |

#### ***INFORMATIVE CHARACTERISTICS***

- |   |            |
|---|------------|
| • Average Particles Size- (D50 - Malvern) | 13 microns |
|---|------------|

#### ***Typical Uses***

- Printing inks for flexography and gravure that require aluminium pigment with high metallic effect.

---

Before using the product, we recommend that you consult the safety information, including the adequate handling and transport, which are available in the product's Material Safety Data Sheet – MSDS. The information mentioned in this technical bulletin represents our current level of knowledge and experience, but shall not be considered as a guarantee. It is the user's responsibility to assure the adequate use of the product, since **Aldoro** will not accept liability on any type of loss or damage which may arise due to the use of this information or application of the product. **Aldoro** reserves itself the right of changing, without prior notice, any data contained in this bulletin, resulting from adjustment, development or evolution of the production process.
