

TECHNICAL DATA SHEET

Revision: 5

Edition: June/2024

STANLUX SILVER R 4100

- High performance aluminium paste with lamellar particles
- Coarse particles size with narrow curve of particles size distribution
- Non leafing grade specially recommended for application in high performance systems that require differentiated metallic effect
- Solvent: mixture of White Spirit and High Aromatic

SPECIFIED CHARACTERISTICS

- | | |
|-----------------------------------|------------|
| • Solid content | 63% to 67% |
| • Maximum retention in # 325 Mesh | 25.0% |
| • Maximum water content | 0,15% |

INFORMATIVE CHARACTERISTICS

- | | |
|---|------------|
| • Average Particles Size- (D50 - Malvern) | 45 microns |
|---|------------|

Typical Uses

- This product is specially recommended for application in formulations for double layer systems and that require aluminium pigment with high metallic effect .

Before using the product, we recommend that you consult the safety information, including the adequate handling and transport, which are available in the product's Material Safety Data Sheet – MSDS. The information mentioned in this technical bulletin represents our current level of knowledge and experience, but shall not be considered as a guarantee. It is the user's responsibility to assure the adequate use of the product, since **Aldoro** will not accept liability on any type of loss or damage which may arise due to the use of this information or application of the product. **Aldoro** reserves itself the right of changing, without prior notice, any data contained in this bulletin, resulting from adjustment, development or evolution of the production process.
